Python

PHP

timeout

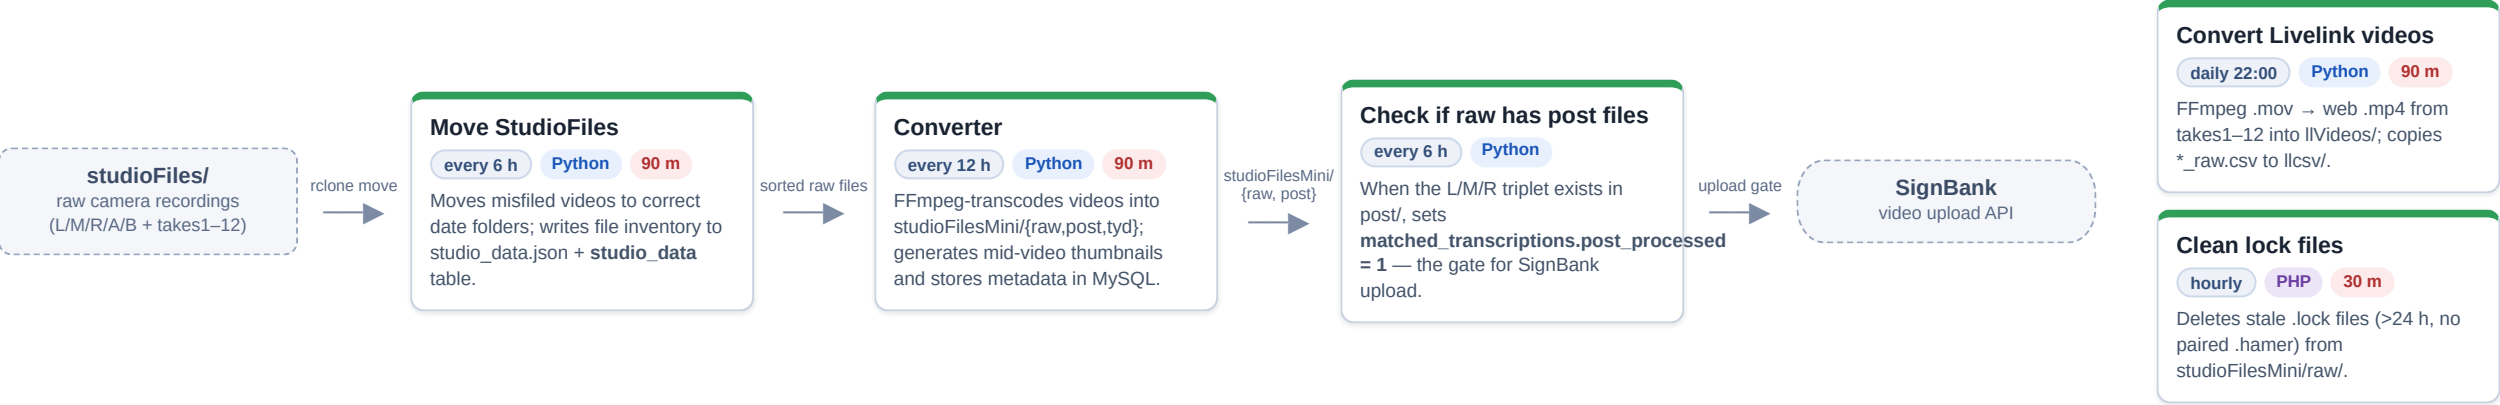

1 · Mocap / Vicon pipeline

Motion-capture recordings travel from the Vicon PC to the web server, get matched to database records, are archived to SharePoint, and finally the originals are deleted from the capture machine — strictly in that order, with verification before every deletion.

2 · Studio video pipeline

Raw studio recordings are sorted into the right date folders, transcoded to lightweight web versions with thumbnails, and flagged as post-processed once complete camera triplets (L/M/R) exist — which gates the SignBank upload workflow.

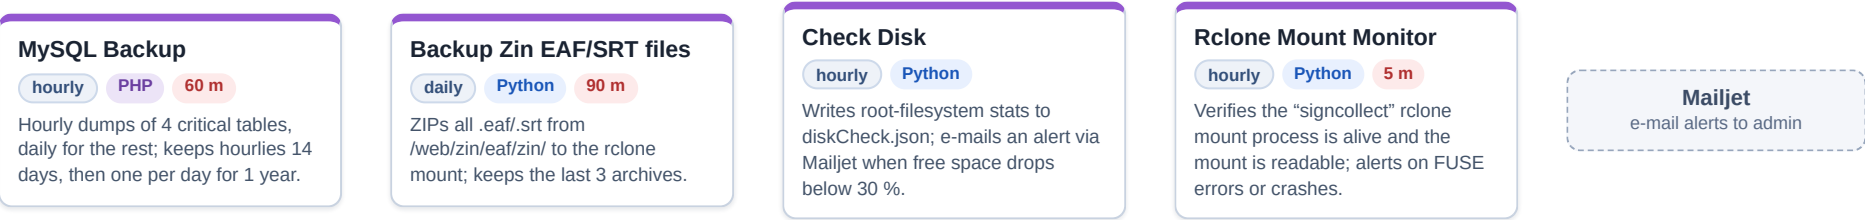

3 · Annotation / linguistics pipeline

ELAN annotation files (EAF/SRT) are the source of truth for sign-language transcriptions. Their tiers are synced into the **sentences** table, enriched with lemma lookups, and finally served to the front end as cached theme queries.

4 · Backup & monitoring (independent safety net)

These services have no pipeline order — they run independently to protect data and keep the infrastructure the other pipelines rely on (disk space, the rclone mount, the database) healthy.

Scheduler behaviors (scheduler.py): 20-worker thread pool · per-service timeout (default 30 min, configurable) with automatic process kill · stuck "running" services cleaned after 3 h · heartbeat to watchdog.log every 5 min with watchdog alerts after 10 min silence · per-service log file (`<service>.log`) in its working directory · graceful shutdown on SIGINT/SIGTERM.

Service reference

All 17 services from config.json — schedule, runtime and purpose

Service	Schedule	Runtime	Timeout	Script	Purpose
Get Themas	hourly	PHP	30 m	/web/zin/api/getThemas.php	Serves distinct themes (with video candidates) from form_data as JSON, with a 24-hour cache.
Clean lock files	hourly	PHP	30 m	/web/cleanLockFiles.php	Deletes .lock files older than 24 h from studioFilesMini/raw/ when no paired .hamer file exists.
Converter	every 12 h	Python	90 m	/web/helpScripts/convert.py	FFmpeg-transcodes studio videos into studioFilesMini/{raw,post,tyd}, generates thumbnails, updates video metadata in MySQL; skips files > 1 GB.
MySQL Backup	hourly	PHP	60 m	/web/helpScripts/mysqlBackup.php	Hourly backups of 4 critical tables (CameraRecords, form_data, matched_transcriptions, sentences), daily for others; 14-day hourly + 1-year daily retention.
Check Disk	hourly	Python	30 m*	~/pythonCron/checkDisk.py	Monitors root-filesystem usage, writes diskCheck.json, e-mails a Mailjet alert below 30 % free space.
Backup Zin EAF/SRT files	daily	Python	90 m	/web/helpScripts/zinBackup.py	ZIPs all .eaf/.srt annotation files to the rclone mount (studioFiles/zinBackup); keeps the last 3 archives.
Move StudioFiles	every 6 h	Python	90 m	/web/helpScripts/check_studiofiles.py	Moves misfiled raw videos to the correct date folders via rclone; writes per-date file inventory to studio_data.json and the studio_data table.
Check if raw has post files	every 6 h	Python	30 m*	/web/tempScripts/compareFiles.py	Compares raw vs post folders; marks matched_transcriptions.post_processed = 1 when the full L/M/R triplet exists — gates SignBank upload.
convert zinString to LemmaList	hourly	Python	30 m*	/web/josBoard/lemma_lookup.py	Extracts words from sentences.zinString, resolves lemmas via hh_words, writes sentences.lemmaList JSON (falls back to the original word).
Update field gvg at sentences	daily	Python	30 m*	/web/zin/eaf/zin/GvGtoSql.py	Parses the “Gebaar-voor-gebaar” tier from SRT files and updates sentences.gvg with a JSON gloss array.
sync Vicon files (rsync)	daily 02:30	Python	120 m	~/viconSync/sync_vicon_rsync.py	Pulls FBX/GLB/CSV/JSON/Shogun captures from the Vicon PC over SSH with incremental caching (full rescan weekly); converts FBX → GLB on arrival.
match Vicon FBX/CSV files	daily 23:00	Python	30 m*	/web/mocap/matchVicon.py	Matches synced FBX/CSV files to mocap_files records by gloss + take; fills vicon_fbx / vicon_csv columns.
Convert Livelink videos	daily 22:00	Python	90 m	/web/mocap/convert.py	FFmpeg-converts Livelink .mov recordings (takes1–12) to web-friendly .mp4 in IIVideos/; copies *_raw.csv files alongside.
Sync Mocap Files	every 6 h	Python	24 h	~/pythonCron/sync_mocap_files.py	rclone-uploads FBX/GLB/CSV/JSON/Shogun files to SharePoint (signcollect/studioFiles/mocapFiles); deletes local Shogun files after size-verified sync.
Cleanup OBS from Vicon PC	weekly 04:00	Python	30 m	~/viconSync/cleanup_obs.py	Deletes OBS .mkv and Shogun capture files from the Vicon PC, but only after verifying size-matched copies exist locally or on the rclone remote.
Rclone Mount Monitor	hourly	Python	5 m	~/pythonCron/rclone_monitor.py	Checks the signcollect rclone mount process and mount readability; reports PID/CPU/memory and alerts on FUSE errors or crashes.
Sync EAF to Database	hourly	PHP	30 m	/web/zin/syncEafToDatabase.php	Extracts Netherlands, Gebaar-voor-gebaar and Signbank-ID tiers from EAF files into sentences (zinStringEAF, gvg, glosses); tracks eaf_sync_status per record.

* default scheduler timeout (no explicit timeout_minutes in config.json). Source: config.json + script analysis, 2026-06-10. Scheduler: scheduler.py — retries failed services daily 06:00–06:30, cleans services stuck “running” > 3 h.
